Solutions to your challenges

GRAF offers an extensive range of products for water resource management. At GRAF, global challenges such as water protection meet the brand quality of "Made In Germany". We provide the solutions to your challenges.

Global network of sales partners and production facilities!

Sales partners in more than 80 countries help us develop solutions suited to local markets and deliver the customer support needed locally.

The manufacturing process is essential for a top-quality product. GRAF masters the production of plastic products at the highest quality level and with the most modern machines.

Three strong wastewater technology brands

Every GRAF wastewater product benefits from the experience gained from over 1,000,000 satisfied users and the quality of our established brands in wastewater treatment.

Fast responses, even when special solutions are needed

Our products are exported around the globe. Intelligent logistics and sufficient stock levels ensure first-class availability of standard solutions, as well as for customised rainwater solutions.

Plastic – clear benefits over concrete

Concrete tanks are at risk of corrosion through constant contact with wastewater and may require expensive refurbishment. Tanks made of plastic do not react with wastewater and are therefore a durable and reliable solution. Also, because of their low weight, plastic tanks can be installed without heavy equipment. This means that they can be easily transported and installed in locations that are difficult to access.

Manufacturing certified according to ISO 9001 and 50001

Our oneLines structure

Our **oneLines** portfolio offers wastewater solutions for single & multiple households, holiday lets, hotels, camping sites, offices as well as larger housing developments & commercial developments.

Our extensive range of Cesspools, Septic tanks, Anaerobic treatment systems and fully biological SBR treatment solutions is completed with oneSepa separators.

We focus on wastewater treatment systems utilising GRAF underground tanks with one unified concept.

Special solutions such as retrofitting kits for concrete tanks from 1 – 10,000 inhabitants, container treatment plants and much more are offered through our competence center at the company KLARO GmbH.

A complete range of compact and non-electric residential wastewater treatment plants is offered through BIOROCK.

oneTechnology (SBR) – how does it work?

Ordinary treatment plants require several chambers or even tanks to purify the water properly. This makes a system big and complex.

oneTechnology SBR wastewater treatment systems clean incoming wastewater over a number of cycles (in different sequences). Fewer chambers and tanks are requested. GRAF chambers achieve a cleaning performance of up to 99%. In this respect the GRAF **one2clean** / **one2cleanXtra** systems far surpass legal minimum requirements.

Why use the oneTechnology SBR system?

- **Outstanding cleaning performance**
Even during load fluctuations and underload
- **Excellent value for money**
- **One tank solutions are extremely space-saving**
- **Produces odourless and clear treated water**
- **Ideal for high nutrient removal requirements**
- **Can be adapted to nearly every request thanks to our +modules**

1.

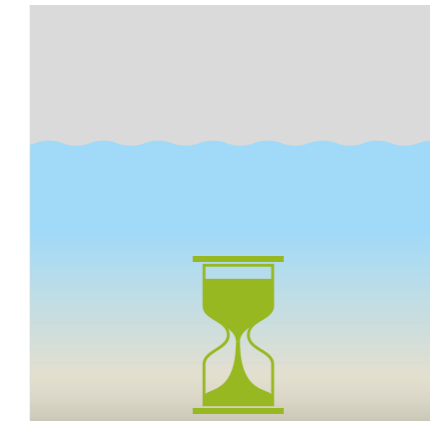

Aeration phase

The wastewater arrives directly in the biological zone without the need for pumping processes. Aeration of the entire container leads to immediate wastewater activation. The microorganisms begin the biological cleaning process without delay.

2.

Settling phase

Aeration is interrupted by the control unit, the activated sludge sinks to the bottom. A clear water zone develops in the upper part of the tank.

3.

Clear water discharging phase

The treated clear water is extracted from the system and the cleaning process can begin once more.

one2clean / one2cleanXtra – the clever way to produce clear water

Our systems up to 70 PE are ideal for making the most of limited space and where high nutrient removal is required.

one2clean / one2cleanXtra is odourless

The entire volume of wastewater is activated with oxygen. The system produces an odourless, clear treated water for extraction to soakaway or waterway.

one2clean / one2cleanXtra already meets the needs of tomorrow

The wastewater treatment systems can achieve sustainable discharge values with an efficiency factor of up to 99%! This offers high investment security – even if legal requirements become stricter.

one2clean / one2cleanXtra

up to 70 PE (10,500l/day)

As much technology as necessary, as little technology as possible.

Over the past few years, wastewater treatment systems have experienced impressive technological developments. Today, they are high-tech products equipped with sophisticated controls and various pumps, sensors and valves. Yet this is often of detriment of product reliability. A reliable wastewater disposal system no longer needs to be complicated. one2clean is an advanced development of the proven SBR wastewater treatment technology, with considerable benefits in terms of operating costs and safety.

Why use the one2clean system?

- **Excellent cleaning performance**
Even during load fluctuations and underload
- Great value for money
- Double sludge storage volume
- Low sludge removal

i Efficiency factor of up to 99 %

Wastewater treatment system one2clean – smart and simple!
GRAF TV
www.graf.info/v224

✓ Incredibly little sewage sludge

Conventional wastewater treatment systems

✓ Minimal maintenance costs

one2clean / one2cleanXtra

✓ Minimal power consumption

Only 38 kWh per person and per year!

Components and Benefits

Covers

- ✓ Suitable for pedestrian or vehicle loading
- ✓ Adjustable in height
- ✓ Inclined up to 5°
- ✓ Enables flush ground installation
- ✓ Discreet cover
- ✓ Allows small corrections of height on-site
- ✓ Reduction of installation cost

Wastewater tank

- ✓ State-of-the-art manufacturing for maximum stability
- ✓ 100 % watertight and corrosion-resistant
- ✓ Can be mounted in groundwater
- ✓ Unique fit accuracy of components
- ✓ Self-anchoring saves installation costs
- ✓ Up to 12t load bearing enables flexible choice of installation location (for example car parks)
- ✓ Tank made of 100 % recycled material, environmentally friendly investment

Installation kit

- ✓ Only one clear water lifter
- ✓ Rugged clear water lifter manufactured in one seamless part
- ✓ Simple maintenance via an integrated, self-cleaning sampling container
- ✓ No electrical part in the tank
- ✓ Fast installation
- ✓ Saves installation costs
- ✓ Keeps service costs to a minimum

one2clean / one2cleanXtra control cabinets

- ✓ Simple handling thanks to micro-processor control
- ✓ Energy-saving
- ✓ Extremely quiet
- ✓ Incredible cost saving due to very low power consumption
- ✓ System can be easily adjusted if required which will reduce costs for the technician

Accessories for one2clean

Outdoor plastic cabinet S

For 3 - 19 inhabitants (up to 2,850 l/d)

Order no. 107990

Benefits

- ✓ Flexible application of the proven **one2clean** control cabinet in a plastic outdoor column
- ✓ Weather-resistant plastic
- ✓ Edge seal for complete sealing over the ground
- ✓ High corrosion protection for the electrical parts
- ✓ Good value for money
- ✓ Easy assembly
- ✓ No foundation necessary

The image shows the Outdoor plastic cabinet S for 3 - 18 inhabitants

Technical data

For air compressors	LA 60-80 / XP60-80, HP 100-200
Upstream fuse	B16A (provided by customer)
Voltage supply	230 V AC ± 20 %, 50 Hz
IP	IP44
Relative air humidity	10 to 95 %
Temperature range	-25°C to +50°C
Total weight	7 kg (15.4 lbs)
Connecting line	via two-pin earthed plug

Carbonator

Carbon infeed

Order no. 107872

Benefits

- ✓ Regardless of system – suitable for other treatment plants (**one2clean** compatible)
- ✓ Individual adjustment of the dosage
- ✓ Low power consumption
- ✓ Fast installation
- ✓ Simple operation

The Carbonator was especially designed to keep wastewater treatment systems with seasonal inflow stable and working correctly, e.g. in holiday homes. The additional Carbonator module automatically feeds the systems with nutrients that keep the microorganisms alive when there is no wastewater inflow.

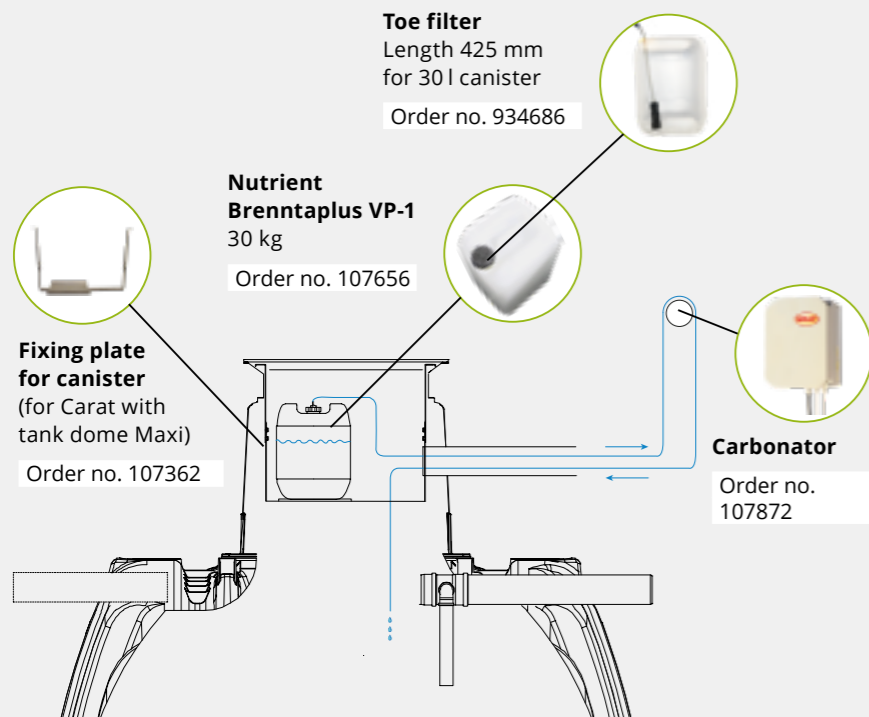

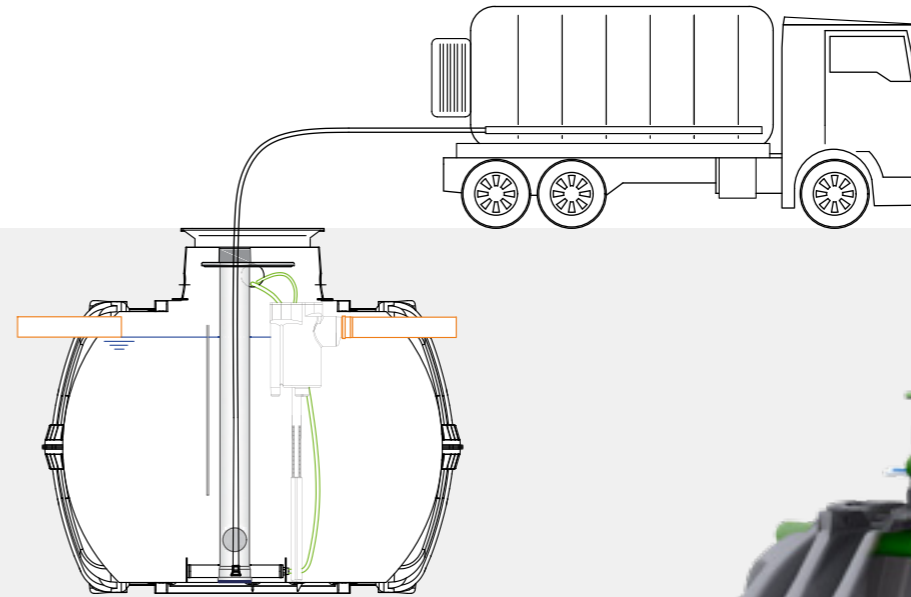

Sludge removal kit

for **one2clean**

Order no. 106670

Benefits

- ✓ Removes sludge to guarantee a continuous treatment performance
- ✓ Keeps sufficient sludge necessary for cleaning process
- ✓ Helps to avoid damaging internal components whilst emptying

Toe filter
Length 425 mm
for 30 l canister
Order no. 934686

Nutrient Brenntapplus VP-1
30 kg
Order no. 107656

Fixing plate for canister
(for Carat with tank dome Maxi)
Order no. 107362

Carbonator
Order no. 107872

Odour-tight empty pipe seal DN110 for systems compatible with SBR-hose packages up to 28 PE

- Ensures no air, humidity or gas escapes from conduit pipe
- No need for PU seals
- Clean and professional solution

Order no. 107887

SBR hose package

For **one2clean** (one-tank systems)
Includes: 1 x Ø 19 mm and 1 x Ø 13 mm PVC hose; colour-coded

Length: 10 m
Order no. 107686

Length: 20 m
Order no. 107688

Other SBR-hoses on request

Tank dome Micro

- Weight: 7 kg (15,43 lbs)
- Including green lid
- For shallow excavation
- Earth cover only 90 mm

Order no. 371009

one2cleanXtra domestic wastewater solutions

3 – 9 PE (450 – 1,350l/day)

Outdoor Cabinets

for one**Advanced** / one**2clean**Xtra

Outdoor plastic cabinet M

- Easy access for the maintenance fitter
- Function checking is simple as the control unit is located immediately next to the system
- Ideal solution for large distances from the house (> 20 m)
- Flexible use of the proven GRAF Indoor PP control cabinet in the Outdoor plastic cabinet M (size 3 – 28 inhabitants)
- Lockable housing in sturdy, weather-resistant plastic
- Integrated double power socket for easy maintenance
- No foundation necessary

Outdoor plastic cabinet L

- Easy access for the maintenance fitter
- Maintenance engineer
- Function checking is simple as the control unit is located immediately next to the system
- Lockable housing (simultaneous locking) in sturdy, weather-resistant plastic
- Hose connections colour-coded
- No foundation necessary

Outdoor steel cabinet L*

- Particularly robust design of powder coated steel sheet (1.5 mm / 0.005")
- Spray proof (IP 44)
- Lockable housing
- Hose connections colour-coded

Outdoor steel cabinet XL*

- Particularly robust design of powder coated steel sheet (1.5 mm / 0.005")
- Spray proof (IP 44)
- Lockable housing
- Hose connections colour-coded

Outdoor steel cabinet XXL*

- Particularly robust design of powder coated steel sheet (1.5 mm / 0.005")
- Spray proof (IP 44)
- Lockable housing
- Hose connections colour-coded

Available +modules

+module	Order no.
<p>+D Denitrification module The +D module for denitrification (removal of nitrogen) results in the clarified water quality satisfying very strict requirements. The GRAF systems thereby attain a Ntotal value (total parameters of inorganic nitrogen compounds) of less than 25 mg/l.</p>	On request
<p>+P Phosphate removal module Phosphate in water results in a massive build-up of algae. The GRAF +P module ensures the safe removal of phosphate and therefore great water quality.</p>	105958*
<p>+C Carbon infeed module Solution for weekend homes The addition of carbon as a nutrient allows the purification process to continue and prevents the biology from dying off.</p>	105946*
<p>+O Pump-operated outlet module Lifts the clear water when the outlet pipe is lower than the water course.</p>	On request
<p>+B Module buffer pump for short-term peak loads Only suitable for oneAdvanced</p>	107406
<p>+R Remote transmission modules Remote monitoring allows error messages to be transmitted to mobile phones and operating data to be queried by text message. Convenient remote wastewater treatment system controlled by mobile network or LAN is also possible.</p> <ul style="list-style-type: none"> • Greater efficiency • Greater operating reliability • Optimised service intervals • Greater customer benefit thanks to monitoring service • Low-cost remote diagnosis in the event of a fault without the service fitter having to come on site 	On request
<p>+H Hygiene module – Disinfection Disinfection using the +H module (by chlor or UV) satisfies even the most stringent of purity requirements for a GRAF wastewater treatment system. It reliably kills off germs and microorganisms. The clarified water therefore complies with the EU Bathing Water Directive.</p> <ul style="list-style-type: none"> • Easy to operate • Maintenance-friendly thanks to easy-to-remove module • Fitted in downstream shaft • Controllable chlorine dosing for chlor module 	On request

Sand filtration
In case of strict effluent quality requirements or high influent load variations, the GRAF sand filtration module is recommended to enhance and stabilize the purification performance of your sewage treatment system. The self cleaning dual media filtration system reduces suspended solids, COD and BOD of the secondary clarified effluent and may also serve to prevent debris in downstream installed storage or collection tanks for the re-use of wastewater.

- Patented, simple and valve-free setup with automatic gravitationally driven backwash for minimal maintenance requirements
- Certified performance according to EN 12566-7
- Prefabricated plug and play system guarantees minimal work for piping and installation on site
- Robust UV- and waterproof housing with lock for outside installation

106389

* For systems up to 50 PE

Available +modules

Bluecycle module (chlorination & sand filter)

Avoid the wastage of precious fresh water resources through the re-use of highly treated wastewater for outdoor purposes like gardening. We recommend you combine the benefits of GRAF sand filtration and GRAF chlorination subsequent to your GRAF biological sewage treatment plant for the safe re-use and storage of your treated wastewater.

Re-use for:

- Watering lawn and flowers
- Watering fruit and vegetable garden
- Clean your car
- General cleaning

Benefits

- ✓ Chlorination widely available liquid sodium hypochlorite solution
- ✓ Prevention of pathogen regrowth and fouling in water hoses and irrigation systems through the long-term effect of chlorine
- ✓ Certified performance according to EN 12566-7
- ✓ Controllable chlorine dosing
- ✓ Safe and simple handling of the disinfection chemical

Bluecycle components

- 1 Outdoor plastic cabinet M with auxiliary control and dosing with pump for chlorine module
- 2 Oxylift clearwater pump
- 3 Dosing pump with auxiliary control for Chlorine
- 4 Sand filter
- 5 5 m Clearwater hose 1 ¼"
- 6 Tray for Chlorine canister
- 7 Reaction tank for tertiary treatment

bluecycle - re-use your treated water

The special solution for above ground installation

Fully biological wastewater treatment system for treating all domestic sewage with advanced **oneTechnology** (SBR). Different tank sizes and system variants possible depending on requirements.

- Sewage treatment tank made from HDPE
- Above-ground installation
- Can be used in very confined spaces
- For low volume of sewage
- Cost-effective

Application areas

- Alternative if underground installation not possible
- Small businesses
- Retrofitting of existing above-ground systems
- For temporary use
- Test sewage treatment system

KLAROMAX Customised solution for the efficient treatment of large volumes of wastewater

Q **WEBCODE** G5206

Specially designed for applications with a daily wastewater volume of 150 m³ or more per day, the KLARO MAX wastewater treatment plant is a reliable solution for a wide variety of locations worldwide.

Our systems are characterised by their impressive performance and versatility. The KLARO MAX wastewater treatment technology is designed to be very safe and robust, and is also extremely flexible when it comes to adapting to the specific requirements of a wide range of applications. From industrial plants to municipal facilities – KLARO MAX sets new standards in wastewater treatment. The efficiency of KLARO MAX is the result of state-of-the-art technology and many

years of experience in the development of wastewater treatment plants.

We also offer the option of further optimising the system with various additional modules to meet the individual requirements of our partners.

- Robust technology
- Individual planning
- Energy-efficient treatment process
- Reliable safty principle

Example: Two-line system from 5,000 PE

KLAROcontainer The intelligent mobile wastewater solution

Q **WEBCODE** G5116

KLAROcontainer is the mobile wastewater treatment plant in the standard 20 feet or 40 feet container. The plant was designed to be easily assembled and disassembled (plug-and-play principle). This makes the container plant particularly suitable for temporary use. It can be used in a wide variety of areas, such as traveling construction sites, worker camps, quarries or production sites with many workers. It is also suitable for remote locations such as research, tourist or military camps. Due to the installation in the container, the technology is optimally protected against all weather conditions and additionally easy to transport.

KLAROcontainer is a fully biological wastewater treatment plant that operates according to the proven KLARO SBR concept.

- Easy to transport (standard 20 ft container)
- Refabricated and expandable construction
- Quick assembly and disassembly (plug-and-play)
- Low power consumption (13 kWh/d – 20 ft container)
- Designed for 15 m³ (20 ft container) per day resp. 34,5 m³ (40 ft)
- Modularly expandable for larger wastewater volumes

easy**Compact** – The non-electric fully biological treatment plant up to 6 PE (900 l/d)

The compact small wastewater treatment system

The easy**Compact** was specifically designed for properties with very little or irregular inflow.

Thanks to the revolutionary GRAF Rock filters, the water is cleaned in a biological and natural way.

Benefits

- ✓ Compact: minimal space needed
- ✓ Simple handling due to low weight
- ✓ Easy installation with completely telescopic and tiltable attachments
- ✓ Suitable for all types of holiday lets
- ✓ Easy maintenance tanks to large opening

IDEAL FOR
 HOLIDAY HOMES

Drainage class C

Video small wastewater treatment system easy**Compact**
GRAF TV
www.graf.info/v226

How does the easy**Compact** work

1 Preliminary clarification
 The wastewater goes into the first treatment chamber in which fats and other floating substances on the surface are deposited while the solids settle.

2 Biological treatment
 The pretreated water then flows into the distribution system that the various layers of filters optimally supply. The mineral contained in GRAF Rock is a very efficient carrier material for biological treatment of the water.

3 Continuous ventilation
 The sophisticated ventilation principle ensures optimal oxygen supply for biological purification.

4 Derivation of the purified water
 Depending on the circumstances of the site, the purified wastewater flows through the system in a free gradient or with a pump.

Anaerobix

GRAF Wastewater Treatment System with Biological Filter

i Ideal for infiltration of cleaned wastewater
>> page 68

Simple and low-cost

Anaerobix is the low-cost anaerobic filter system for GRAF wastewater tanks. Filled with the carrier material supplied, it increases the cleaning performance of a wastewater tank several times over. The large surface of the recyclable plastic carrier material (141 m²/m³) allows the biofilm responsible for the cleaning process to cover a large area.

The benefits of the Anaerobix system at a glance

- ✓ Very good cleaning performance: efficiency over 90 %, PIA-tested (Testing Institute for Waste Water Technology)
- ✓ No electric or mechanical components in tank
- ✓ Largely maintenance-free
- ✓ Installation in proven GRAF tanks
- ✓ Easy to install with standard DN 110 pipes
- ✓ Very good value for money

Septic Tank

i Ideal for infiltration of cleaned wastewater
 >> page 68

Who needs septic tanks?

Septic tanks are still the most common treatment systems being used for private houses worldwide.

Floating and removable material is extracted from domestic wastewater in mechanical wastewater tanks. This is purely mechanical cleaning.

GRAF offers a versatile range of septic tank solutions. GRAF tanks can be upgraded to fully-biological treatment plants or rainwater harvesting systems.

Benefits

- ✓ Stability tested according to European standard (DIN EN 12566-1)
- ✓ Fast tank fitting with profile seal and fast connectors
- ✓ Tanks can be used for rainwater harvesting systems after thorough cleaning
- ✓ Low weight: can also be installed in difficult local conditions without a crane
- ✓ Low maintenance: maintenance or cleaning work can be performed through the shafts
- ✓ Tanks can be used as rainwater harvesting systems after thorough cleaning

Cesspools

Who needs wastewater cesspools?

Our wastewater cesspools are the ideal solution for all properties without a sewer connection and with little or irregular wastewater volume. For example:

- Allotments or weekend houses
- Residential houses as a temporary solution until a sewer connection can be made

Benefits

- ✓ Can be installed in groundwater
- ✓ Shallow installation
- ✓ Easy installation due to low net weight (Platin)
- ✓ The tank can also be used as a rainwater collection tank after cleaning
- ✓ Self-anchoring (only Carat S)

Carat S Underground Tank

Benefits

- ✓ Unrivalled fitting accuracy
- ✓ Ribbed tank base
- ✓ Steady in groundwater thanks to extremely stable construction thanks to its extremely stable construction
- ✓ Very high stability thanks to modern production methods
- ✓ Made of 100 % recycling material
- ✓ Easy to transport, 5 - 9 tanks per pallet
- ✓ Up to 36 complete wastewater systems or 45 wastewater tanks per lorry

Carat S: Reduce freight costs by up to 80 %

GRAF TV

Flush with ground level

- Unique fit accuracy of the components
- Suitable for vehicle loading (when combined with the adequate telescopic dome shaft)
- Numerous seals to effectively stop dirt getting into the tank
- The height of the telescopic tank dome can be smoothly adjusted
- The telescopic tank dome can additionally be inclined by 5° to suit the local conditions
- Impact-resistant

Carat S Underground Tank

Choose your tank domes and covers

Tank dome Micro

- Weight: 7 kg (15,43 lbs)
- Including green lid
- For shallow excavation
- Earth cover only 90 mm

Order no. 371009

Tank dome Mini

- Weight: 11 kg (24 lbs)
- For especially flat installation
- Incl. 3 edge seals
- For systems up to 2 tanks

Order no. 371041

Tank dome Maxi

- Weight: 15 kg (33 lbs)
- For large earth coverings (loading capacity)
- Incl. 5 edge seals
- For multi tank systems ≥ 4 tanks

Order no. 371040

Extension

- Weight: 6 kg (13 lbs)
- The earth covering can be raised 300 mm using the extension

Order no. 371003

Telescopic dome shaft 600 Mini

- With PP lid
- Suitable for pedestrian loading
- Weight: 9 kg (19 lbs)
- Adjustable earth covering across upper tank surface

plus 140 – 340 mm (5.51 – 13.4") earth covering

Order no. 371010

Telescopic dome shaft 600 Maxi

- With PP lid
- Suitable for pedestrian loading
- Weight: 15 kg (33 lbs)
- Adjustable earth covering across upper tank surface

plus 140 – 440 mm (5.51 – 17.3") earth covering

Order no. 371011

Telescopic dome shaft 600 cast iron

- Suitable for vehicle loading – with childproof cast iron cover up to 3.5 t (7716 lbs)
- Weight: 55 kg (121 lbs)
- Adjustable earth covering across upper tank surface

plus 140 – 440 mm (5.51 – 17.3") earth covering

Order no. 371020

Telescopic dome shaft 600 universal

- Suitable for vehicle/ lorry-bearing
- Weight: 11 kg (24 lbs)
- Cover to be provided on site
- Adjustable earth covering across upper tank surface
- For commercially available concrete rings/covers (to be provided on site)

plus 140 – 440 mm (5.51 – 17.3") earth covering

Order no. 371021

Telescopic dome shaft 600 car

- Suitable for vehicle loading – with childproof plastic lid cover up to 3.5 t (7716 lbs)
- Weight: 22,5 kg (50 lbs)
- Adjustable earth covering across upper tank surface
- Perfect fitting accuracy
- Corrosion free, childproof plastic cover

plus 140 mm – 440 mm (5.51 – 17.3") earth covering

Order no. 371052

Tank dome Micro

Tank dome Mini

Tank dome Maxi

Telescopic dome shaft 600 Mini suitable for pedestrian loading

Telescopic dome shaft 600 cast iron suitable for vehicles

Telescopic dome shaft 600 car suitable for vehicles

Carat S Underground Tank

Choose your baffle position

The baffle separates the Carat S underground tank into two or three chambers as desired. It consists of two halves and is simple to insert when assembling the second tank half of the Carat S. A profile seal provides reliable and permanent separation of the chambers. The Carat S underground tank with baffle is ready for use as a multichamber tank. This can then be expanded by means of a system pack to create a wastewater treatment system (>> page 58). The system pack is simply fitted to the baffle and the control unit is installed in the house – and the wastewater treatment system is ready to go.

The baffles of the Carat S underground tank are supplied on pallets and can easily be inserted in the tanks as needed.

Flexible baffle positions

Examples of different baffle positions.

Baffle for Carat S tank

Volume [l]	pcs/pal	Positions	Weight [kg]	Order no.
2,700 (700 US gal.)	9	1/2	20 (44 lbs)	375067

DESIGNPREIS 2007
NOMINEE

Infiltration tunnel Benefits and Functionality
GRAF TV
www.graf.info/v214

The Graf Infiltration Tunnel has been mainly designed for the use in private and rural areas. The system, which consists of one or more tunnel modules and two end plates, can be extended as desired. The tunnel is laid in one or more lines of the same level. As the weight of one module is only 11 kg, the handling of the Infiltration Tunnel is excellent. The surface above the tunnels is suitable for vehicle loading, offering varied possibilities for use.

Up to 12,000 litres infiltration volume per pallet
Thanks to its special design, the GRAF Infiltration Tunnel can be stacked easily. Consequently, the shipment of up to 40 Infiltration Tunnels on one pallet saves considerable transport and storage costs.

Vehicle loading
For versatility, the surface above the infiltration tunnels can withstand a continuous load of up to 100 kN/m² and is therefore also suitable for vehicle loading.

Easy installation
The GRAF Infiltration Tunnels are laid in lines and can be flexibly adapted to specific conditions and to the individual storage volume requested. The installation of the modules is easy, quick and variable. Installation is possible without heavy equipment, as one Infiltration Tunnel weighs just 11 kg. The tunnel modules are simply joined together in a line and two end plates are fitted per line.

i One infiltration tunnel, replaces 36 M of drainage pipe

oneSepa separator systems

One of the biggest dangers for water is pollution from mineral liquids (such as petrol, oil, grease, ...). Just a single drop of petrol is enough to pollute 1 m³ of pure water.

To prevent environmental damage caused by the uncontrolled discharge of oil contaminated surface water runoff, effective and safe methods of separation technology must be used everywhere where light liquids come into contact with water.

With the light fluid separator oneSepa Oil – as well as the grease separator oneSepa Grease – GRAF offers sophisticated separation systems.

Where to use which separator?

oneSepa Grease is the perfect add on for GRAF treatment plants. When a kitchen (restaurant) is connected to a fully biological treatment, a grease separator should be installed in front of the system. oneSepa Oil is the ideal solution for Stormwater water management systems. If rainwater from gas stations, car washes or car parks feeds into a drainage or attenuation system (e.g. GRAF EcoBloc), a Light fluid separator is recommended.

Plastic – clear benefits over concrete

Because of their low weight, separators made of plastic can be installed without heavy equipment. This allows easy transport and installation even in places that are difficult to access.

Ready for connection

All the components of GRAF separators are pre-fitted ready for connection, allowing time to be saved during on-site installation.

Maximum water pollution control

Pure, clean water is one of the essential things in life, yet it's exposed to a large number of pollutants. One of the greatest hazards is contamination with light mineral liquids. A single drop of petrol is enough to contaminate one cubic metre of water.

GRAF separators offer maximum safety and protect the environment. The focus is of course in compliance with stipulated limit values.

Tested safety – with approval

GRAF separators are made of particularly robust and tough plastic. The fact that it is sealed up to the ground surface is a major advantage of plastic as a material.

No need to refurbish

Since they come into constant contact with highly aggressive wastewaters, concrete separators are at risk of corrosion and may require expensive refurbishment. Plastic separators, on the other hand, have smooth inner surfaces that will not corrode.

System overview oneSepa Grease

Areas of application

Grease separators are needed wherever water is contaminated with fats and oils of natural origin. This concerns for example the following operations:

- Kitchen facilities and industrial kitchens (restaurants, hotels, etc.)
- Food distribution points with returnable dishes
- Meat and sausage processing plants (e.g. slaughterhouses, butcheries)
- Oil processing plants (e.g. oil mills)
- Plants for the production of ready meals

Two tank domes

From size NS4, GRAF grease separators have two tank domes. Inlet and outlet are therefore easily accessible for easier inspection.

Flexible tank dome:

- Sealed up to the ground surface
- Easy adjustment to the ground surface thanks to telescopic/tiltable dome shaft
- Compatible with standard concrete rings and covers

HGV trafficable

In conjunction with HGV trafficable Class D cover

>> page 80

Sizing

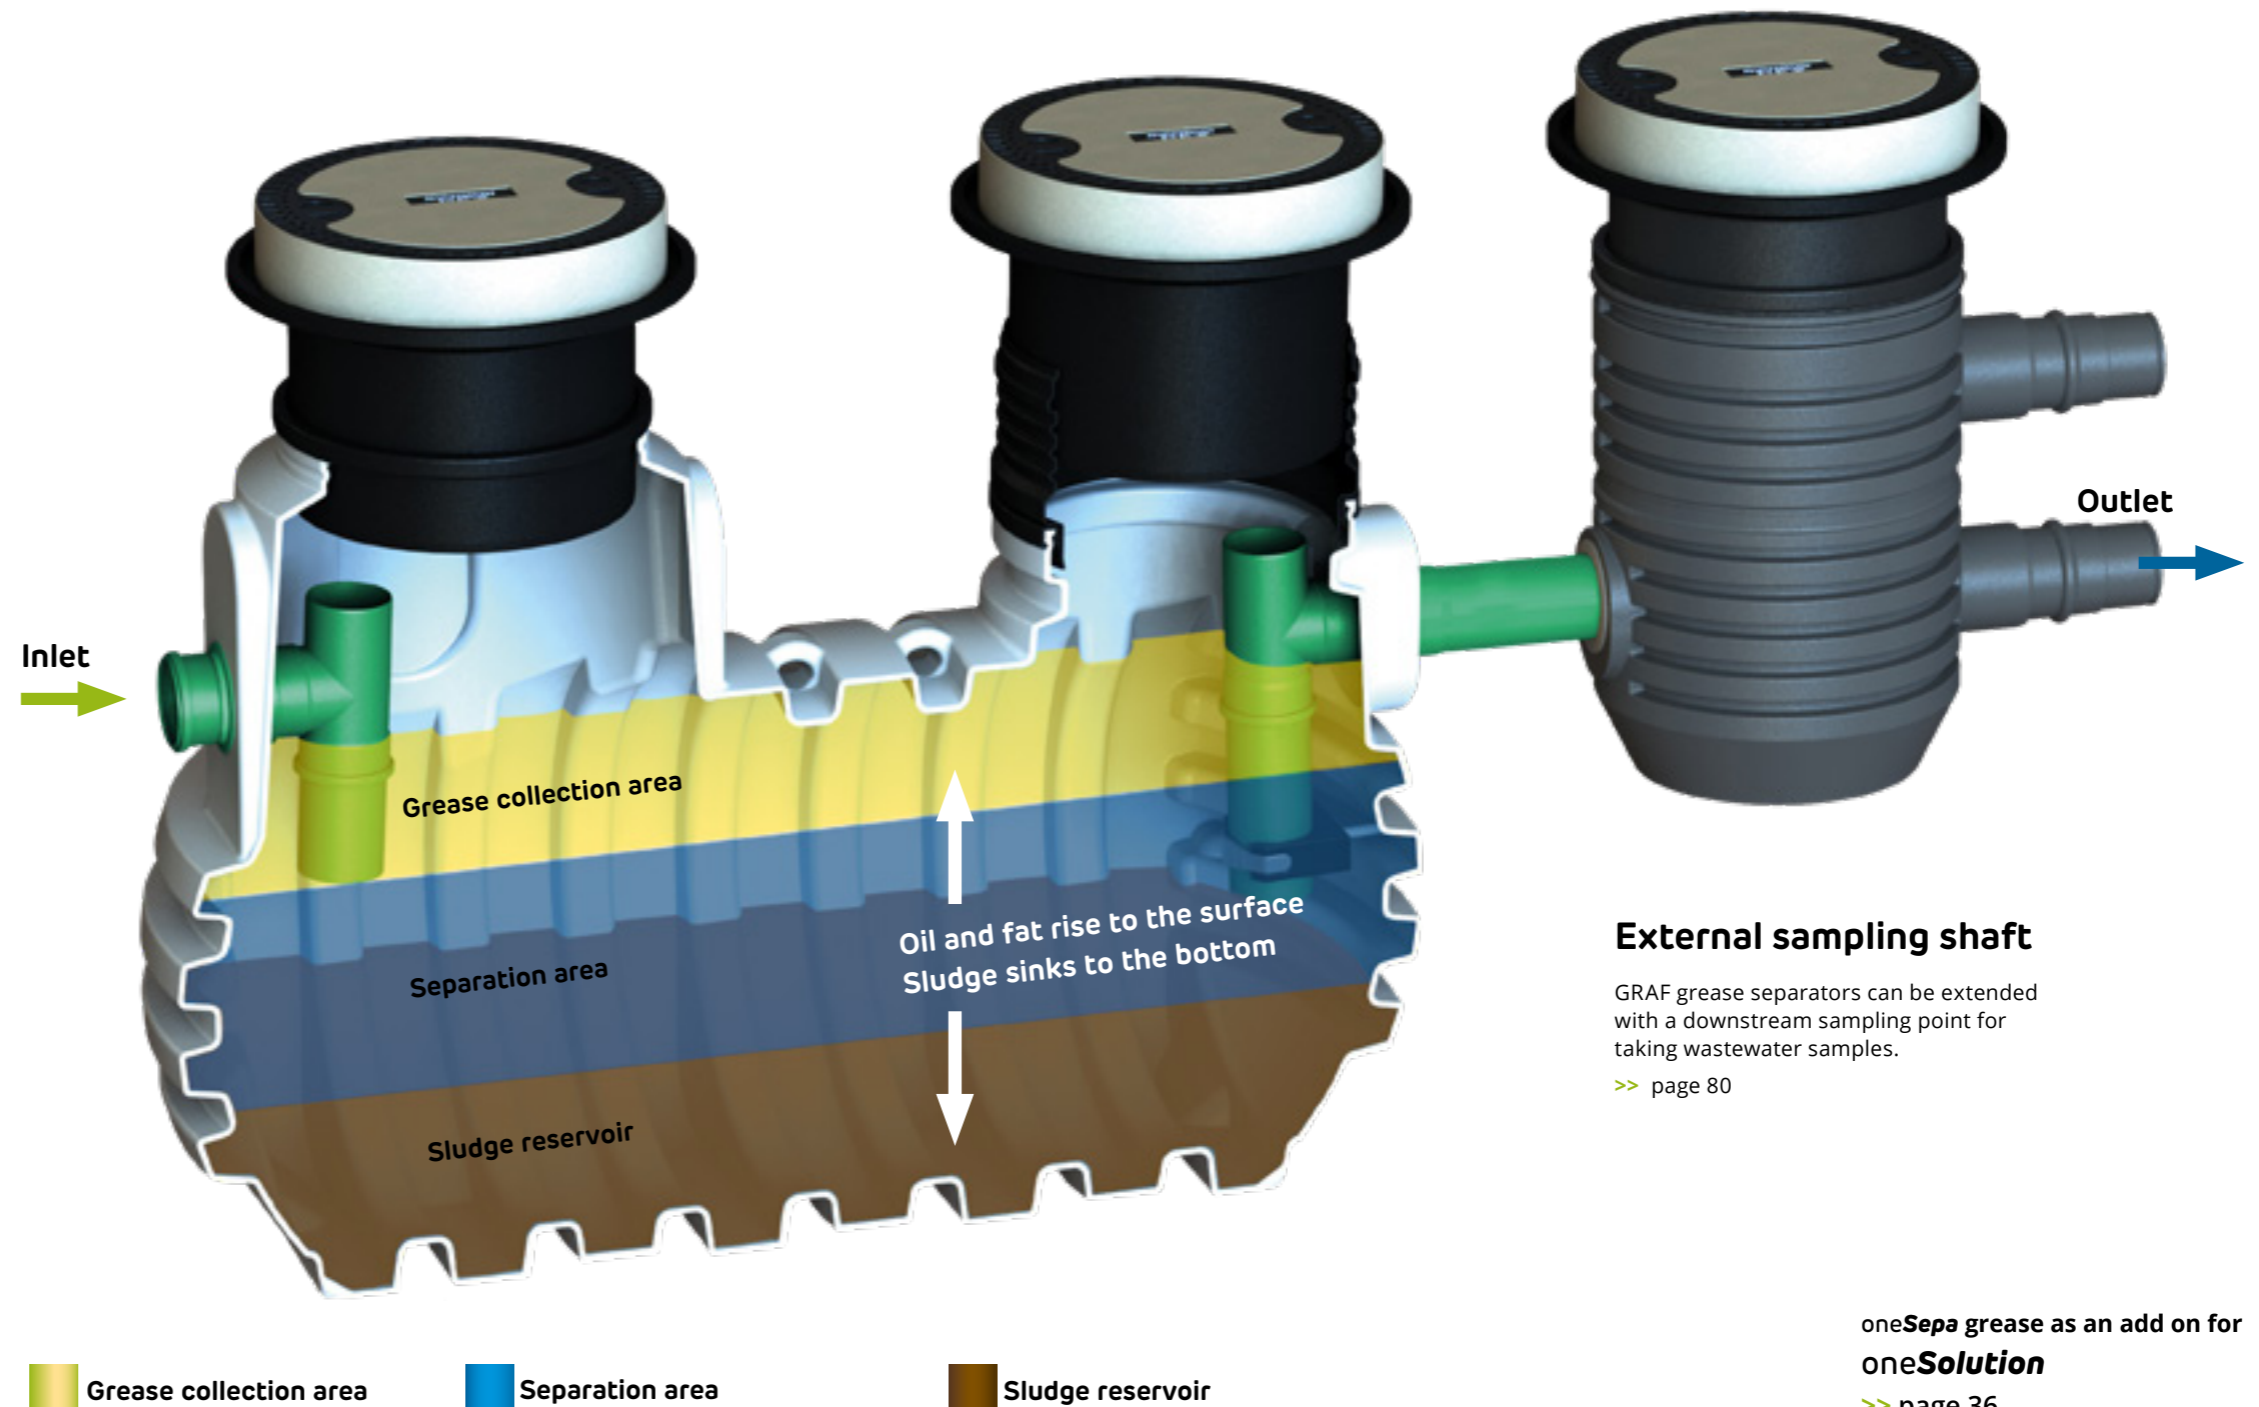

Separator systems are classified by NS (nominal size). The choice of nominal size for the separator is specified in Part 2 of EN 1825. Furthermore, the requirements of the respective competent authority must be observed. A free calculation service for sizing according to EN 1825 is available on request.

Functional principle

A grease separator system works according to the physical principle of gravity. This means that heavy components in the wastewater, such as sludge, can settle at the bottom of the tank. In contrast, light components such as fats and oils rise to the surface of the water.

Benefits

- ✓ Low weight of the tank means no need for heavy equipment, compared to concrete systems
- ✓ Easy transport and installation, even in places that are difficult to access
- ✓ System is delivered pre-fitted
- ✓ Smooth and corrosion-free inner surfaces thanks to high-quality plastic

External sampling shaft

GRAF grease separators can be extended with a downstream sampling point for taking wastewater samples.

Lifting key for covers					934790

*Height less 20 mm, which the concrete cover protrudes into the telescopic dome shaft

Dome structure

- Including NBR lip seals for smooth connection
- Sealed up to the ground surface
- Easy adjustment to the ground surface thanks to telescopic/tilting dome shaft
- Can be driven over by cars or trucks - for standard concrete rings/covers
- Infinitely adjustable earth covering across upper tank surface, tilts 5° (ideal for asphalt surfaces)

Height adjustable and tiltable

The dome structures can be adjusted in height and inclination (up to 5%), allowing greater flexibility during installation.

Please note: A load-distributing reinforced concrete slab is required to permanently ensure trafficability for cars and trucks. Further information can be found in our installation instructions.

External sampling shaft

The separator systems can be extended with an external sampling point. The sampling shaft is connected downstream from the separator tank. In addition to taking wastewater samples in accordance with the regulations, it is also used to check and maintain the system.

Scope of supply

- 1 Sampling shaft

Not included in the scope of supply:

- 2 Telescopic dome shaft, separators
- 3 Concrete cover sampling shaft

Procedure and structure

Areas of application

A light fluid separator is needed wherever water is contaminated with petrol, mineral oils or greases. This concerns for example the following operations:

- Petrol stations
- Car washes
- Garages
- Large/public parking areas (if required by the authorities)

Sizing

Separator systems are classified by NS (nominal size). The choice of nominal size for the separator is specified in Part 2 of EN 858. Furthermore, the requirements of the respective competent authority must be observed. A free calculation service for sizing according to EN 858 is available on request.

Separation efficiency*
 Class I ≤ 5 mg/l residual oil
 Class II ≤ 100 mg/l residual oil
*under test conditions

Benefits

- ✓ Undemanding, low-waste maintenance of the coalescence unit
- ✓ Stainless steel mesh for coalescence until (systems ≥6) can be easily removed and cleaned
- ✓ Small internal sampling point pin available (saves additional cost of an external sampling shaft)
- ✓ Low weight of the tank means no need for heavy equipment, compared to concrete systems
- ✓ System is delivered pre-fitted
- ✓ Smooth and corrosion-free inner surfaces thanks to high-quality plastic

Video light fluid separator
 GRAF TV
www.graf.info/v219

Functional principle

A light fluid separator system works according to the physical principle of gravity. This means that heavy components in the wastewater, such as sludge and sand, can settle in the optional sludge trap and / or in the sludge trap integrated in the separator. In contrast, light components such as fats and oils rise to the surface of the water. An optional coalescence unit improves the separation efficiency of a light fluid separator.

Optional coalescence unit

- No wear and tear
- Easy to clean
- Low weight

Self-acting closing unit

The float of this unit ensures that when the maximum storage volume of the light fluid is reached, the outlet is closed and thus any fluid is retained in the separator.

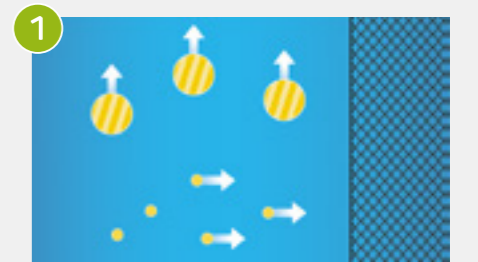

Class II and Class I

The Class II system is the basic version of the light fluid separators. Due to the amount of oil they store, the separators are designed so that they can also be used at petrol stations with high-performance fuel pumps.

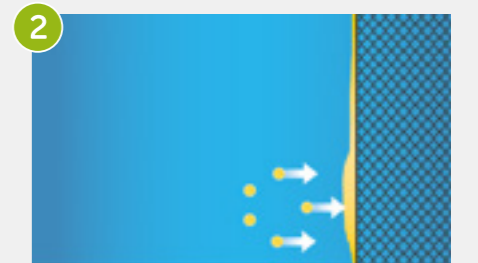

The Class I separator is a coalescence separator. It features an additional coalescence unit that enables a much higher degree of separation.

Onesepa oil as an add on for
 >> www.graf.info/stormwater-management

What does a coalescence unit do?

In addition to large oil droplets that can be easily separated, very small oil droplets also occur in a light fluid separator. Large oil droplets have a high difference in density to water, these rise. Small oil droplets have a small difference in density to water, these remain under the water surface.

To allow these small oil droplets to rise, the Class I light fluid separator features a coalescence unit where the small oil droplets can collect.

If enough small oil droplets have collected on the coalescence unit, large oil drops will be formed there. These rise and can be separated.

Accessories for oneSepa Oil

Covers

Covers for oneSepa Oil with inscription "Separator/Separador/Séparateur/Separatorer"

Cover	Ø [mm]	Height H [mm]	Effective height [mm]	Weight [kg]	Order no.
Extention Length 400 mm	600	400	300	6	371039
Extention Length 1100 mm	600	1210	1000	22	371061
1 Telescopic dome shaft, separators	855	460	340	11	107974
2 Class B concrete cover for oneSepa Oil	780	135	115*	120	107967
2 Class D concrete cover for oneSepa Oil	780	160	140*	180	107968
2 Class B concrete cover for sampling shaft	730	125	105*	97	107983
2 Class D concrete cover for sampling shaft	730	165	145*	174	107984
Lifting key for covers					934790

*Height less 20 mm, which the concrete cover protrudes into the telescopic dome shaft

Dome structure

- Including NBR lip seals for smooth Connection
- Sealed up to the ground surface
- Easy adjustment to the ground surface thanks to telescopic/tilting dome shaft
- Can be driven over by cars or trucks – for standard concrete rings/covers
- Infinitely adjustable earth covering across upper tank surface, tilts 5° (ideal for asphalt surfaces)

Height adjustable and tilttable

The dome structures can be adjusted in height and inclination (up to 5%), allowing greater flexibility during installation.

Please note: A load-distributing reinforced concrete slab is required to permanently ensure trafficability for cars and trucks. Further information can be found in our installation instructions.

Outdoor sampling shaft

The separator systems can be extended with an outdoor sampling point. The sampling shaft is connected downstream from the separator tank. In addition to taking wastewater samples in accordance with the regulations, it is also used to check and maintain the system.

Scope of supply

- 1 sampling shaft

Not included in the scope of supply:

- 2 Telescopic dome shaft, separators
- 3 Concrete cover sampling shaft

Connection [DN]	Ø [mm]	Order no.
160	600	107975
200	600	107982

Outdoor sampling with DN160/200 Connection, difference inlet and outlet of 30 mm

260	1000	1040 – 1220	1300 – 1480	21

Maintenance kit

The maintenance kit for separator systems contains everything you need to carry out the monthly self-checks.

Order no. 106619

Warning system connection set

Incl. wall duct, seal, drill hole on the tank on the desired side

Order no. 106869

Wall duct

with NBR seal, for separator

Order no. 106515

Warning sensors

Incl. 10 m cable

Type 1:

Oil film thickness alarm

Order no. 107964

Type 2:

Build-up alarm

Order no. 107965

Type 3:

Oil film thickness and build-up alarm

Order no. 107966

Optional sludge trap oneSepa Oil

Picture: John Deere GmbH & Co. KG

All separator systems can be extended with an upstream sludge trap. An additional sludge trap serves to retain coarse floating matter and dirt, which settle on the bottom of the sludge trap as sediment. Subsequently, the now pre-treated wastewater is discharged into the separator. Additional sludge traps are useful and necessary if there is an increased amount of dirt in the oily wastewater, e.g. washing areas for construction site vehicles, construction machinery, agricultural machinery, truck wash stands and automatic vehicle washing systems, e.g. gantry car washes or car wash tunnels.

Scope of supply

- 1 Saphir or Diamant tank with pre-assembled components, sludge trap

Picture shows Saphir tank incl. extension piece as tank dome

- Not included in the scope of supply:**
- 2 Extension piece as tank dome
 - 3 Telescopic dome shaft, separators
 - 4 Concrete cover for light fluid separators

Picture shows Diamant tank incl. 1 extension piece as tank dome

Saphir/Diamant sludge trap

for a greener planet

for a greener planet

Climate change. Our world is currently facing huge challenges. In these trying times, the world needs good role models. Or rather: initiators that are not only preaching sustainability, but put it into practice. Just as we at GRAF are already making an important contribution. After all, it is not only our solutions for rainwater management and other applications related to our water that are thoroughly sustainable, but also the plastic we use to make our products.

For example, we turn short-lived food packaging into EcoBloc infiltration modules, with a lifespan that spans generations. In this way, we can make our cities a little safer against increasing heavy rainfalls. Or rainwater tanks allow us to water our gardens with a clear conscience even during hot spells. Along the way, recycling saves us about 100,000 tonnes of CO2 every year, which is almost as much as the emissions of over 60,000 cars.

By the way, we recycle our products ourselves. Our raw materials competence centre makes us unique. It is our heart and soul, containing not only all of our innovative power, but also our lifeblood. For a better world for us all – for a greener planet.

The GRAF recycling cycle

This is us

The whole world is talking about sustainability. For us, it has long been a natural part of our DNA. We recognized the potential of rainwater early on: „Rainwater is free“ was one of our first campaigns back in the 1970s. Rain barrels were produced in our family business as early as 1974. The first underground tanks for rainwater harvesting followed just four years later. GRAF rain barrels have been made from recycled material since 1980. By the way, rainwater is still free of charge. But in times of climate change, drought and heavy rain, sustainable water management is much more than that: it is a valuable contribution to our future.

For this we stand

 **75 %**
share of recycling material

 **Environmental products for SUSTAINABLE**
water management

 **100.000 TONNES CO₂ savings**
every year as much as more than
60,000 cars emit

 **LONG SERVICE LIFE**
and spare parts supply

 **Recycling material**
FREE FROM POLLUTANTS

 **80 % share of renewable**
energies in production

 **Products**
FULLY RECYCLABLE

 **State-of-the-art production**
facilities for **LOW ENERGY**
CONSUMPTION
